(54) Title: PROXIMITY TRIGGERED JOB SCHEDULING SYSTEM AND METHOD

(57) Abstract: A system and method combine mobile computing device, wire-
less communication interface, and an application program to provide the mo-
bile computing device user to schedule and execute jobs based on the proximity
to other wireless communication interface. The scheduler schedules jobs and
chooses a proximity relation of presences of one or more identifier of MAC
sublayer or data link layer of wireless communication interfaces as trigger con-
dition. When the trigger condition of a job is true, scheduler executes the job.
